Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Azakami *et al.* (6,092,234) shows, in Fig. 3, see column 2, lines 19- 39, a branch metric decoder ("metric value threshold determining device") for a Viterbi decoder consisting of a convolutional encoder 13 and Viterbi decoder 17. Nara (6,061,823) shows, in Fig. 1, a CRC means 3 receiving the output of a Viterbi decoder 2A which is used to determine whether error detection can be executed or not.

Claims 1-12 are allowed.

The following is an examiner's statement of reasons for allowance: None of the cited references teach or fairly suggest the use of a linear feedback shift register (separate from a convolutional encoder) as an element of a branch metric generator of a Viterbi decoder as recited in independent claim 1 or of a number sequence generator providing an input to a selector in a branch metric generator of a Viterbi decoder as recited in independent claim 7.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
